Bing

There are many free Django tutorials available online, but some of them may be outdated or incomplete. Based on the web search results, I would suggest you to check out the following courses:

- [Python and Django Full Stack Web Developer Bootcamp](): This is a comprehensive course that covers everything you need to know to build a website using Python, Django, and many more web technologies. You will learn how to use HTML, CSS, Bootstrap, Javascript, jQuery, Python 3, and Django to create dynamic and interactive web pages. You will also learn how to work with databases, user authentication, REST APIs, and deployment. This course has over 32 hours of video lectures, quizzes, projects, and exercises to help you master the skills.
- [Building Web Applications in Django](): This is a course offered by the University of Michigan on Coursera. You will learn how Django communicates with a database through model objects, how to use Object-Relational Mapping (ORM) for database access, how to create Django templates and forms, how to use Django admin interface, and how to implement class-based views and REST APIs. You will also learn how to set up a PostgreSQL database and how to deploy your Django project to AWS. This course has about 16 hours of video lectures, readings, quizzes, and assignments.
- [Python Django Dev To Deployment](): This is a practical course that teaches you how to build a real estate application using Python and Django. You will learn how to create a virtual environment, install Django and other dependencies, create a project and an app, design models and migrations, create views and templates, add pagination and search functionality, implement user registration and authentication, create custom middleware and signals, use AWS S3 for media storage, and deploy your project to DigitalOcean. This course has about 10 hours of video lectures and source code.

I hope this helps you find the best Django tutorial for your learning needs. Happy coding! 😊
